Skills

Languages: Java, Python, JavaScript, C, C#, SQL, HTML, CSS

Framework: React, Angular, Apache TomEE, Node.js, Python Flask, .NET, JQuery, JSON, Flutter

Dev Tools: MyEclipse, AWS, Kubernetes, Apache Ant, Jira, Jenkins, JFrog, PractiTest, VSCode, Git

Values: Participative leadership, Empathy, Communication, Customer-first Approach

Work Experience

NCR Voyix \ Full Stack Developer (January 2024 – December 2024)

- Developed **Java-based** applications using MyEclipse, architected **RESTful API endpoints**
- Handling deployments via **Tomee** and **Ant build** systems, incorporating ActiveMQ for message brokering.
- Debugged and optimized Java and **JavaScript** codebases, including **React** and **Node.js** applications, with extensive use of **JSON** for data interchange.
- Utilized **Kubernetes** for deploying multiple builds on Windows and Linux VMs, ensuring seamless and scalable deployment processes.
- Authored and executed test cases in **PractiTest**, leading testing efforts across various features to ensure high-quality deliverables.
- **Created design documents** for new client-facing initiatives, implementing our designs in Java (Spring Boot).

University of Guelph \ Head Teaching Assistant – Data structures (September 2023 – December 2023)

- **Led a team of teaching assistants**, ensuring consistency in grading, providing constructive feedback, and offering problem-solving support.
- **Conducted lab sessions** and provided personalized assistance to students, helping them deepen their understanding of data structures and algorithms.

Digital Kitchener Innovation Lab \ Innovation Lab Assistant (May 2023 – August 2023)

- Developed a chatbot using **OpenAI API and LLM**, enabling users to efficiently inquire about zoning bylaws in Kitchener, enhancing user engagement and access to information.
- Engineered a web application, EcoScan, utilizing **AWS EC2** instances for real-time object detection and waste categorization, significantly improving the app's efficiency and user experience.

Kenna \ Web Application Developer (September 2022 – December 2022)

- Developed and maintained dynamic web applications using Node.js, React, MSSQL, and JavaScript, ensuring high performance and scalability.
- Proactively debugged and resolved production issues in a timely manner, improving system reliability and user satisfaction.

Township of Centre Wellington \ IT&S Co-op (May 2022 – September 2022)

- **Automated information management** on the organization's private cloud service by integrating RESTful APIs, enhancing data accessibility and efficiency.
 - Developed a responsive website using **JavaScript and Python Flask**, providing a user-friendly interface for internal and external users.
 - Deployed and hosted the website on an **Apache web server**, ensuring stable and secure access.
-

Education

University of Guelph \ Bachelor of Computing | General (Co-op) (September 2020 – September 2024)

Academic Projects:

COVID-19 Statistical Analysis (2021)

- Analyze correlations between COVID-19 cases and other data using Seaborn, Matplotlib and Pandas

SVG Parser Web Application (2022)

- Designed and implemented an interactive web-based GUI using JavaScript and Node.js, optimizing user-server communication and enabling dynamic content updates through XML DOM manipulation.
- Integrated C-based SVG parsing libraries, ensuring compliance with web standards and enhancing the application's ability to handle and display complex graphics.
